

Safran Oil Systems has renewed its Environmental Sustainability Certification through 2023

Safran Oil Systems, a 36,250 SF manufacturer of commercial airline oil tanks, located in Fort Myers, FL, and operating as a subsidiary of Safran Aero Boosters, a \$1B, Belgian-based global leader in lubrication units, oil tanks, heat exchangers, and special valves, has continued its environmental sustainability commitment by renewing and extending its Edenark Group ISO 14001 sustainability certification through 2023.

The Edenark Group ISO 14001 is the world's premier environmental sustainability certification program and allows SMEs (small to mid-sized enterprises) the ability to attain the world's most popular environmental certification standard via a program designed and priced specifically for them. Edenark Group also helps clients pursue carbon neutrality and ESG compliance, using the Edenark Group ISO 14001 as a foundation for long term compliance.

The program, which allows companies to progressively improve at a pace that works for their needs, helps the organization define how it interacts internally, externally, and with the environment. It incorporates energy/waste/water, employee health and performance enhancement, community involvement, procurement and suppliers, compliance and regulations, emergency/security, and stakeholder engagement. Benefits include creating a culture of continual improvement, stakeholder engagement, lower costs, higher revenues and profits, improved employee performance, and..... doing the right thing for the environment and current and future generations.

“We are best of class in aircraft engine oil tanks development and production and accept the responsibility of leading this effort that will make a global impact,” said Jean-Pierre Posset, General Manager of Safran Oil Systems. “Our organization, including our employees in Florida and the rest of the world, cares deeply about the environment and sustainability. We are excited to receive this certification and join the others around the world that have chosen to be

part of the solution. In 2022, while recovering from the impact of the pandemic and a hurricane that devastated our community, our team showed its resolve by completing eight environmental sustainability projects that addressed issues such as electricity consumption, air quality, team health, paper reduction, recycling and Styrofoam reduction. Further, we were able to also plan a broad list of 2023 projects that our Green Team is excited about tackling this coming year.”

“Safran Oil Systems is a pleasure to work with and is an example of what the world needs more of – an organization that produces a superior product, supports its current stakeholders, shows it cares about future generations via its commitment to sustainability certification, and makes more money due to its sustainability programs,” said David Goodman, CEO of Edenark Group. “When an organization executes the Edenark Group ISO 14001 sustainability certification, as Safran Oil Systems is doing, it not only benefits the environment, but it also benefits its own operation,” added Goodman.
